

Contents

Basic Notions, Real Numbers	6
1.1 Elementary Exercises	7
1.2 Basic Logical Concepts	8
1.3 Methods of Proof	10
1.4 Sets	16
1.5 Axioms of the Real Numbers	17
1.6 The Number Line	21
Convergence of a Sequence	25
2.1 Limit of a Sequence	26
2.2 Properties of the Limit	32
2.3 Monotonic Sequences	36
2.4 The Bolzano–Weierstrass theorem and the Cauchy Criterion	38
2.5 Order of Growth of the Sequences	40
2.6 Miscellaneous Exercises	41
Limit and Continuity of Real Functions	43
3.1 Global Properties of Functions	45
3.2 Limit	58
3.3 Continuous Functions	65
Differential Calculus and its Applications	71
4.1 The Concept of Derivative	74
4.2 The Rules of the Derivative	76
4.3 Mean Value Theorems, L’Hospital’s Rule	81
4.4 Finding Extrema	83
4.5 Examination of Functions	85
4.6 Elementary Functions	87
Riemann Integral	93
5.1 Indefinite Integral	96
5.2 Definite Integral	104
5.3 Applications of the Integration	110
5.4 Improper integral	113
Numerical Series	116
6.1 Convergence of Numerical Series	117
6.2 Convergence Tests for Series with Positive Terms	120
6.3 Conditional and Absolute Converge	124

Sequences of Functions and Function Series	127
7.1 Pointwise and Uniform Convergence	130
7.2 Power Series, Taylor Series	133
7.3 Trigonometric Series, Fourier Series	138
Differentiation of Multivariable Functions	142
8.1 Basic Topological Concepts	144
8.2 The Graphs of Multivariable Functions	146
8.3 Multivariable Limit, Continuity	150
8.4 Partial and Total Derivative	152
8.5 Multivariable Extrema	158
Multivariable Riemann-integral	163
9.1 Jordan Measure	165
9.2 Multivariable Riemann integral	168
Line Integral and Primitive Function	176
10.1 Planar and Spatial Curves	178
10.2 Scalar and Vector Fields, Differential Operators	181
10.3 Line Integral	182
Complex Functions	190
Solutions	198
Bibliography	320
