I Problems **11**

1 Basic notions. Axioms of the real numbers **13**
1.0.1 Fundaments of Logic . . . 13
1.0.2 Sets, Functions, Combinatorics . . . 16
1.0.3 Proving Techniques: Proof by Contradiction, Induction . . . 18
Fibonacci Numbers . . . 21
1.0.4 Solving Inequalities and Optimization Problems . . . 22
1.1 Real Numbers . . . 24
1.1.1 Field Axioms . . . 24
1.1.2 Ordering Axioms . . . 25
1.1.3 The Archimedean Axiom . . . 25
1.1.4 Cantor Axiom . . . 26
1.1.5 The Real Line, Intervals . . . 27
1.1.6 Completeness Theorem, Connectivity . . . 29
1.1.7 Powers . . . 29

2 Convergence of Sequences **31**
2.1 Theoretical Exercises . . . 31
2.2 Order of Sequences, Threshold Index . . . 37
2.3 Limit Points, liminf, limsup . . . 40
2.4 Calculating the Limit of Sequences . . . 42
2.5 Recursively Defined Sequences . . . 46
2.6 The Number e . . . 48
2.7 Bolzano–Weierstrass Theorem and Cauchy Criterion . . . 50
2.8 Infinite Sums: Introduction . . . 50

3 Limit and Continuity of Real Functions **55**
3.1 Global Properties of Real Functions . . . 55
3.2 Continuity and Limits of Functions . . . 57
3.3 Calculating Limits of Functions . . . 60
3.4 Continuous Functions on a Closed Bounded Interval . . . 64

© Typotex Kiadó

3.5 Uniformly Continuous Functions . . . 65
3.6 Monotonity and Continuity . . . 66
3.7 Convexity and Continuity . . . 66
3.8 Exponential, Logarithm, and Power Functions . . . 67
3.9 Trigonometric Functions and their Inverses . . . 68

4 Differential Calculus and its Applications 71
4.1 The Notion of Differentiation . . . 71
4.1.1 Tangency . . . 76
4.2 Higher Order Derivatives . . . 77
4.3 Local Properties and the Derivative . . . 78
4.4 Mean Value Theorems . . . 78
4.4.1 Number of Roots . . . 79
4.5 Exercises for Extremal Values . . . 79
4.5.1 Inequalities, Estimates . . . 80
4.6 Analysis of Differentiable Functions . . . 81
4.6.1 Convexity . . . 82
4.7 The L'Hospital Rule . . . 82
4.8 Polynomial Approximation, Taylor Polynomial . . . 84

5 The Riemann Integral and its Applications 87
5.0.1 The Indefinite Integral . . . 87
5.0.2 Properties of the Derivative . . . 89
5.1 The Definite Integral . . . 89
5.1.1 Inequalities for the Value of the Integral . . . 91
5.2 Integral Calculus . . . 91
5.2.1 Connection between Integration and Differentiation . . . 92
5.3 Applications of the Integral Calculus . . . 92
5.3.1 Calculating the Arclength . . . 93
5.4 Functions of Bounded Variation . . . 93
5.5 The Stieltjes integral . . . 93
5.6 The Improper Integral . . . 94

6 Infinite Series 97

7 Sequences and Series of Functions 103
7.1 Convergence of Sequences of Functions . . . 103
7.2 Convergence of Series of Functions . . . 105
7.3 Taylor and Power Series . . . 107

8 Differentiability in Higher Dimensions 109
8.1 Real Valued Functions of Several Variables . . . 109
8.1.1 Topology of the n-dimensional Space . . . 109

8.1.2 Limits and Continuity in $\mathbb{R}^n$ . . . 112
8.1.3 Differentiation in $\mathbb{R}^n$ . . . 114
8.2 Vector Valued Functions of Several Variables . . . 120
8.2.1 Limit and Continuity . . . 120
8.2.2 Differentiation . . . 120

9 Jordan Measure, Riemann Integral in Higher Dimensions 123

10 The Integral Theorems of Vector Calculus 131
10.1 The Line Integral . . . 131
10.2 Newton-Leibniz Formula . . . 132
10.3 Existence of the Primitive Function . . . 133
10.4 Integral Theorems . . . 135

11 Measure Theory 139
11.1 Set Algebras . . . 139
11.2 Measures and Outer Measures . . . 140
11.3 Measurable Functions. Integral . . . 141
11.4 Integrating Sequences and Series of Functions . . . 141
11.5 Fubini Theorem . . . 142
11.6 Differentiation . . . 143

12 Complex differentiability 145
12.0.1 Complex numbers . . . 145
12.0.2 The Riemann sphere . . . 148
12.1 Regular functions . . . 148
12.1.1 Complex differentiability . . . 148
12.1.2 The Cauchy–Riemann equations . . . 149
12.2 Power series . . . 149
12.2.1 Domain of convergence . . . 149
12.2.2 Regularity of power series . . . 150
12.2.3 Taylor series . . . 151
12.3 Elementary functions . . . 151
12.3.1 The complex exponential and trigonometric functions 151
12.3.2 Complex logarithm . . . 152

13 The Complex Line Integral and its Applications 155
13.0.3 The complex line integral . . . 155
13.0.4 Cauchy's theorem . . . 156
13.1 The Cauchy formula . . . 157
13.2 Power and Laurent series expansions . . . 159
13.2.1 Power series expansion and Liouville's theorem . . . 159
13.2.2 Laurent series . . . 160

13.3 Local properties of holomorphic functions 161
13.3.1 Consequences of analyticity 161
13.3.2 The maximum principle 161
13.4 Isolated singularities and residue formula 162
13.4.1 Singularities 162
13.4.2 Cauchy's theorem on residues 162
13.4.3 Residue calculus 165
13.4.4 Applications 166
Evaluation of series 166
Evaluation of integrals 167
13.4.5 The argument principle and Rouché's theorem 170

14 Conformal maps **173**
14.1 Fractional linear transformations 173
14.2 Riemann mapping theorem 175
14.3 Schwarz lemma 178
14.4 Caratheodory's theorem 179
14.5 Schwarz reflection principle 180

II Solutions **181**

15 Hints and final results **183**

16 Solutions **195**
