Table of contents

Table of contents **3**

Introduction **5**

Algorithm description models **7**
- Pseudocode 7
- Representation of algorithms by graphs 8
  - Flow charts: 8
  - Parallel flow charts: 9
  - Data flow graphs: 10

Complexity theory **12**
- The order of growth of functions 12
  - Complexity concepts 15

Basic algorithms **19**
- Searching 19
- Sorting 21
  - Merge sort 21
  - Batcher's even–odd sort 23
  - Full comparison matrix sort 24
  - Multiple term addition 25

Linear algebra **27**
- Basic operations with vectors 27
- Complex operations 28
- The Gauss elimination 28

Fast Fourier Transformation **35**
- Continuous Fourier Transformation 35
- DFT - Discrete Fourier Transformation 36
- FFT - Fast Fourier Transformation. 38

Long arithmetic **46**
- Addition 46
- Multiplication 49
- Division 51
- Exponentiation 52

Interpolation **55**
- Polynomial interpolation 55

Iterations **57**
- Computing constants 57
- Zeros of a function 58
  - Interval halving method 58

Linear approximation 59
Newton's method 60
Multidimensional Newton's method. 61
Parallel approximations 61

Computation of polynomial evaluation 62
Computing the set of powers of a with exponents 1,...,n 63
Parallel polynomial evaluation 65

Monte Carlo method 68

Random number generators 72
Linear recurrence sequences (LRS) 72

References 79
