

# Contents

<b>Introduction</b>	<b>1</b>
Some notation and definitions . . . . .	2
<b>1 Models of Computation</b>	<b>5</b>
1.1 Finite automata . . . . .	7
1.2 The Turing machine . . . . .	10
1.3 The Random Access Machine . . . . .	21
1.4 Boolean functions and Boolean circuits . . . . .	27
<b>2 Algorithmic decidability</b>	<b>37</b>
2.1 Recursive and recursively enumerable languages . . . . .	38
2.2 Other undecidable problems . . . . .	43
2.3 Computability in logic . . . . .	49
2.3.1 Gödel's incompleteness theorem . . . . .	49
2.3.2 First-order logic . . . . .	52
<b>3 Computation with resource bounds</b>	<b>59</b>
3.1 Polynomial time . . . . .	62
3.2 Other complexity classes . . . . .	74
3.3 General theorems on space and time complexity . . . . .	77
<b>4 Non-deterministic algorithms</b>	<b>87</b>
4.1 Non-deterministic Turing machines . . . . .	88
4.2 Witnesses and the complexity of non-deterministic algorithms	90
4.3 Examples of languages in NP . . . . .	95
4.4 NP-completeness . . . . .	103
4.5 Further NP-complete problems . . . . .	109
<b>5 Randomized algorithms</b>	<b>119</b>
5.1 Verifying a polynomial identity . . . . .	119
5.2 Primality testing . . . . .	123

5.3 Randomized complexity classes . . . . .	128
<b>6 Information complexity</b>	<b>133</b>
6.1 Information complexity . . . . .	134
6.2 Self-delimiting information complexity . . . . .	139
6.3 The notion of a random sequence . . . . .	143
6.4 Kolmogorov complexity, entropy and coding . . . . .	145
<b>7 Pseudorandom numbers</b>	<b>153</b>
7.1 Classical methods . . . . .	154
7.2 The notion of a pseudorandom number generator . . . . .	156
7.3 One-way functions . . . . .	160
7.4 Candidates for one-way functions . . . . .	164
7.4.1 Discrete square roots . . . . .	164
<b>8 Decision trees</b>	<b>167</b>
8.1 Algorithms using decision trees . . . . .	168
8.2 Non-deterministic decision trees . . . . .	173
8.3 Lower bounds on the depth of decision trees . . . . .	176
<b>9 Algebraic computations</b>	<b>183</b>
9.1 Models of algebraic computation . . . . .	183
9.2 Multiplication . . . . .	185
9.2.1 Arithmetic operations on large numbers . . . . .	185
9.2.2 Matrix multiplication . . . . .	187
9.2.3 Inverting matrices . . . . .	189
9.2.4 Multiplication of polynomials . . . . .	190
9.2.5 Discrete Fourier transform . . . . .	192
9.3 Algebraic complexity theory . . . . .	194
9.3.1 The complexity of computing square-sums . . . . .	194
9.3.2 Evaluation of polynomials . . . . .	195
9.3.3 Formula complexity and circuit complexity . . . . .	198
<b>10 Parallel algorithms</b>	<b>201</b>
10.1 Parallel random access machines . . . . .	201
10.2 The class NC . . . . .	206
<b>11 Communication complexity</b>	<b>211</b>
11.1 Communication matrix and protocol-tree . . . . .	212
11.2 Examples . . . . .	217
11.3 Non-deterministic communication complexity . . . . .	219
11.4 Randomized protocols . . . . .	223

<b>12 An application of complexity: cryptography</b>	<b>225</b>
12.1 A classical problem . . . . .	225
12.2 A simple complexity-theoretic model . . . . .	226
12.3 Public-key cryptography . . . . .	227
12.4 The Rivest–Shamir–Adleman code (RSA code) . . . . .	229
<b>13 Circuit complexity</b>	<b>233</b>
13.1 Lower bound for the Majority Function . . . . .	234
13.2 Monotone circuits . . . . .	237
<b>14 Interactive proofs</b>	<b>239</b>
14.1 How to save the last move in chess? . . . . .	239
14.2 How to check a password – without knowing it? . . . . .	241
14.3 How to use your password – without telling it? . . . . .	241
14.4 How to prove non-existence? . . . . .	243
14.5 How to verify proofs that keep the main result secret? . . . . .	246
14.6 How to referee exponentially long papers? . . . . .	246
14.7 Approximability . . . . .	248
