Preface	9
I. Part Signals and Systems	13
1. Signals	17
1.1. Hilbert spaces	20
1.2. Signals in the frequency domain	21
1.3. Analytic functions	22
2. Systems	25
2.1. Causal operators	26
2.2. Extended spaces	26
2.3. A discrete-time model	31
2.4. A continuous-time model	34
2.5. State-space systems	36
2.6. System interconnections	42
3. Stability and performances	51
3.1. Feedback systems	51
3.2. The small gain theorem	53
3.3. Stability of LTI systems	55
3.4. Performance	58
3.5. Robust stability	68
3.6. Robust performance	75
3.7. Control design for vertical dynamics	77

6 Contents

II. Part	Design for guaranteed performance	85
4.	The set of all stabilizing controllers	89
4.1.	Q-parametrization of the stabilizing controllers	89
4.2.	Coprime factorization	94
4.3.	Youla parameterization	99
5.	Controller design: an LMI approach	107
5.1.	The state feedback problem	108
5.2.	Output feedback control	112
5.3.	Design for H_2 performance	117
5.4.	Design for H_∞ performance	122
III. Part	Design for optimal performance	131
6.	LQ control	135
6.1.	Linear quadratic regulators	138
6.2.	Automotive examples	143
6.3.	Frequency domain properties	148
6.4.	Guaranteed stability margins	152
6.5.	Deterministic Kalman filtering	155
6.6.	Inverse optimality	157
6.7.	Algebraic Riccati equation	158
7.	H_2 Controller Synthesis	165
7.1.	Full Information controller	171
7.2.	DF and OE H_2 optimal controllers	177
7.3.	Simplified output feedback H_2 optimal controller	178
8.	H_∞ Controller Synthesis	183
8.1.	Finite horizon Full Information problem	185
8.2.	Infinite horizon FI problem	189
8.3.	The H_∞ filter (OE) problem	193
8.4.	Simplified output feedback problem	194
IV. Part	Robust stability, robust performance	197
9.	Robust stability, robust performance	201
9.1.	The General Paradigm	201
9.2.	Robust stability analysis	203
9.3.	Robust performance analysis	210

9.4. Structured uncertainty	212
9.5. Structured Singular Value	219
9.6. Structured singular value analysis	225
9.7. Structured singular value synthesis	226
9.8. Time domain design	230
10. Case study	233
10.1. Actuator dynamics	233
10.2. Robust control design of active suspension systems	236
Appendices	255
A – Appendix	255
A.1. Basic facts	255
A.2. Extensions of positive definite matrices	260
A.3. Variable elimination	262
A.4. The Möbius transformation	264
A.5. Kalman-Yakubovich-Popov type results	267
Index	273
References	275
